Jamesville, NY 13078

**RE: Percolation Testing  
Henneberry Road  
Town of Pompey**

Dear Mr. Person:

Pursuant to your request, I completed percolation testing at the above property on June 18, 2025, related to a potential subdivision of your property.

The testing revealed **satisfactory results** with a stabilized percolation rate of 10 minutes per inch at a location approximately 180' off the road and 100' north of the existing wood line on the existing property.

As discussed, further information will ultimately be needed regarding final house location, size, etc. to make a final determination for the septic system design in accordance with the NYSDOH Appendix 75-A design criteria.

Should you have any further questions or concerns, please let me know.

Very truly yours,

Edward K. Reid, P.E.
